

# Jowl - Lift

## What is a Jowl-lift?

Well, jowls are those little (and sometimes not-so-little) bulges which appear at the bottom of your jaw directly below the corners of your mouth. A Jowl-lift removes those bulges and smoothes out the jawline.

## Do I need a Jowl-lift?

If those bulges are worrying you and aging you then you might like to consider the surgical option to eliminating them. Removing jowls is one of the most reliable and successful surgical rejuvenating procedures there is. A smooth jawline is always youthful and attractive.

## What is the best age to have a Jowl-lift?

When you really can't bear looking at them any more as it is not age related, although they do make one appear older.

## Will it last?

A Jowl-lift lasts particularly well because while the skin is lifted and you will always have that advantage, there is sometimes a collection of fat in those little bulges and this will be removed with surgery and should be gone forever.

from \$9750

## Neck/Jowl-Lift Combination

This combination does real justice to both the neck and the jowls as they are so closely associated. While one without the other will make a difference, both together makes a huge difference. It is a case of 1 plus 1 make 4.
