

Mid-Face, Neck and Jowl-Lift

This combination facial surgery provides the ultimate overall rejuvenation for the face and neck.

As we age facial and neck skin becomes lax and sagging occurs in mainly in 3 areas:

Along the jaw line forming jowls

Beneath the chin often forming a "turkey gobbler" or a double chin

From the nostrils to the outer edge of the mouth as the cheeks collapse downward

Midface, neck and jowl-lift surgery really does take years off your appearance by repositioning the underlying facial, jowl and neck tissues, removing excess sagging skin and tightening the remaining skin. The skin is then redraped for a more youthful look which enhances your facial, jaw and neck structure.

from \$15,750
